

Task 1: Process Diagram

Subject: The diagram below shows the various stages required to produce coffee products from coffee beans

Model Answer #1

Response:

The given diagram illustrates the process of manufacturing coffee products from coffee beans through different stages.

Overall, the process commences with harvesting coffee beans and ends with delivering ready-to-use products to consumers. In total, there are eight main steps, requiring different types of machinery and some human labor.

Initially, once a year, coffee beans are harvested by humans. Following this, harvested beans are sent to factories, whereupon special machines are used for processing them and removing their husks. After that, seeds are dried in the sun for 24 to 72 hours, which requires human intervention to mix them. After hulling dried beans, they are roasted for 10–20 minutes.

The next step is packing the resulting product. This can be done in two ways: packaging with plastic or paper bags. Lastly, the products are transported to special shops and cafes after being loaded onto trucks, delivering them to consumers in different forms.

Evaluation:

Overall Band Score: 9

Task Response (9): Excellent coverage of all stages. Well-organized and clearly presented.

Coherence & Cohesion (9): Logical flow of information. Excellent use of cohesive devices.

Lexical Resource (8): Good range of vocabulary, mostly accurate and precise. Minor improvements in word choice could elevate to Band 9.

Grammatical Range & Accuracy (9): Error-free and demonstrates a wide range of grammatical structures.
