

Task 1: Map

Subject: The two maps below show road access to a city hospital in 2007 and 2010.

WRITING TASK 1

You should spend about 20 minutes on this task.

The two maps below show road access to a city hospital in 2007 and in 2010. Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

The 2007 map shows the City Hospital situated within a Ring Road. A vertical Hospital Rd connects the Ring Road to City Road. To the east of Hospital Rd is a car park for staff and public. A bus stop is located on Hospital Rd. A compass rose indicates North is up, and a legend shows a bus stop symbol.

The 2010 map shows the City Hospital still within the Ring Road. A roundabout has been built at the intersection of Hospital Rd and City Road. To the west of the roundabout is a bus station. To the east is a public car park. A legend shows a roundabout symbol.

Model Answer #1

Response:

The two maps present the details of the facilities and road access to a city hospital in 2007 and 2010.

Overall, there have been several developments in the city hospital and the area around it in the span of 3 years. Many new amenities have been added to the hospital complex like the new bus stand, larger parking space, and a new roundabout. The staff and public parkings have been separated, creating more space and making it more accessible to both the staff and the public.

In the year 2007, the city hospital was connected with the city road through a hospital road. A ring road surrounded the hospital. To the left side of the hospital road, parking space was allotted for both staff and the public which had its entrance from the south side of the ring road, which would make it pretty congested on a busy day.

In the year 2010, the city hospital witnessed a notable upgrade in its amenities. Firstly, a new roundabout was constructed on the city road to handle the traffic more efficiently. A new bus stand was built to the left side of the hospital road, strengthening the transportation network of the hospital. Parking for the staff and public is now separated. Staff parking remains to the right of the hospital road, while the public parking has been shifted to the eastern side of the hospital, providing more space and convenience to the public as well as to the staff.

Evaluation:

Overall Band Score: 9

Task Response (9): Excellent response to the task. All key features are accurately described and compared.

Coherence & Cohesion (9): The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

Lexical Resource (8.5): A wide range of sophisticated vocabulary is used accurately and appropriately. The language is precise and effective.

Grammatical Range & Accuracy (9): The grammar is flawless. A wide range of grammatical structures is used with complete accuracy and fluency.

Model Answer #2

Response:

The maps illustrate the changes in road access to a city hospital between 2007 and 2010.

Overall, significant modifications were made by 2010 to enhance transportation and accessibility. The most notable developments included the separation of public and staff parking areas, the construction of two roundabouts, and the creation of a dedicated bus station to improve public transport.

To the east of the hospital, a new public car park was built, replacing the previous shared parking space. Meanwhile, the general car park, located to the northeast of the medical center, was designated exclusively for hospital staff. Additionally, a roundabout was introduced at the northern entrance of the hospital to facilitate smoother traffic flow and reduce congestion.

In 2007, bus stops were situated on both sides of Hospital Road, causing potential traffic delays. By 2010, these were replaced by a single, larger bus station positioned northwest of the hospital. Another roundabout was constructed at the southern end of Hospital Road, ensuring better traffic circulation and providing safer access for vehicles.

Evaluation:

Overall Band Score: 9

Task Response (9): Excellent response to the task. All key features are accurately described and compared.

Coherence & Cohesion (9): The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

Lexical Resource (9): A wide range of sophisticated vocabulary is used accurately and appropriately. The language is precise and effective.

Grammatical Range & Accuracy (9): The grammar is flawless. A wide range of grammatical structures is used with complete accuracy and fluency.

Model Answer #3

Response:

The provided visual information presents two maps depicting the road access to a city hospital in 2007 and 2010.

Overall, the road access to the city hospital underwent significant changes between 2007 and 2010. New facilities such as a bus station, roundabout, and a separate staff car park were constructed, and the public car park was re-designated for public use only. Moreover, the singular bus stop on City Road remained unchanged during this period.

In 2007, the road access to the hospital incorporated a single bus stop and a combined car park for both staff and public on City Road. However, by 2010, significant alterations were made. The car park was reconfigured to be solely for public use, while an additional staff car park was introduced. Furthermore, a new bus station and a roundabout were constructed, serving as noticeable additions to the road infrastructure for hospital access.

Notably, the only constant feature in both 2007 and 2010 was the singular bus stop on City Road, which remained unchanged. This suggests that while substantial changes were made to the road access infrastructure, the location of the bus stop remained consistent over the three-year period. Therefore, the road access to the hospital in 2010 was notably different from that in 2007 due to the introduction of new facilities and reconfiguration of the car park structure.

Evaluation:

Overall Band Score: 9

Task Response (9): The report fully addresses the task by providing a clear overview of the changes in road access to the city hospital between 2007 and 2010. The key features of the maps are appropriately highlighted, and the information is accurately summarized.

Coherence & Cohesion (9): The report is exceptionally well-organized, with a clear introduction, body paragraphs, and conclusion. The information is presented in a logical sequence, and there is effective use of cohesive devices to guide the reader through the comparison of the two maps.

Lexical Resource (9): The vocabulary used in the report is varied and precise, demonstrating a wide range of lexical resources. The language is sophisticated and natural, with accurate and appropriate word choice throughout.

Grammatical Range & Accuracy (9): The report showcases a wide range of grammatical structures used with full flexibility and control. There are no errors in punctuation or grammar, and the sentences are varied and accurately constructed.
