

## Task 1: Bar Chart

**Subject:** the chart below shows the percentage of adults of different age groups in the uk who used the internet everyday from 2003 to 2006

## Answer #1

### Response:

The bar graph illustrates the daily internet usage rates among adults across different age groups in the United Kingdom over a four-year period, from 2003 to 2006.

Overall, the data reveals a generalized decline in internet usage across all age categories during the specified timeframe, with the 16-24 age group consistently reporting the highest engagement, while the 65 and older demographic exhibited the least.

In the younger cohort of 16-24 years, the percentage of internet users started at approximately 110% in 2003, peaked at 115% in 2004, before experiencing a minor decline to 105% in 2005, ultimately dropping to 100% in 2006. This group demonstrated the highest levels of engagement throughout the period. The 25-44 age bracket showed a different trajectory, beginning at 80% in 2003, increasing to 85% in 2004, before returning to 80% in 2005, and finally declining to 75% in 2006. Similarly, the 45-54 age group exhibited a decreasing trend, starting at 70% in 2003 and reducing steadily to 50% by the end of the observed period.

For the older demographics, the 55-64 age group initiated internet use at 40% in 2003, experienced a slight uptick to 45% in 2004, followed by a reduction to 40% in 2005, and culminated at 27% in 2006. The 65 and older category reported the lowest usage rates, starting at 20% in 2003 and witnessing a modest increase to 25% in 2004. However, this figure fluctuated, ultimately decreasing to 20% in 2006. Collectively, these trends indicate that while younger adults increasingly engaged with the internet, the older populations showed a consistent decline in engagement over the specified period.

### Scores:

Overall Band Score: 9

Task Response: 9 - Excellent response to the task. All key features of the graph are accurately described and analyzed.

Coherence & Cohesion: 9 - The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

Lexical Resource: 9 - A wide range of sophisticated vocabulary is used accurately and appropriately. The language is precise and effective.

Grammatical Range & Accuracy: 9 - The grammar is impeccable. A wide range of grammatical structures is used with complete accuracy and fluency.

## Answer #2

## Answer #3

### Response:

The bar graph presented delineates the daily internet usage among various age demographics in the UK from 2003 to 2006.

Overall, the data indicate a discernible decline in internet usage across all age groups throughout the specified period, with the 16-24 age bracket consistently demonstrating the highest engagement.

Specifically, individuals aged 16 to 24 exhibited the most robust internet usage during the years under review, with percentages starting at 110% in 2003, peaking at 115% in 2004, but subsequently declining to 105% in 2005 and 100% in 2006. In contrast, the 25-44 age group recorded a more moderate but steady decrease from 80% in 2003 to 75% in 2006. This group experienced a brief uptick in 2004 to 85% before reverting to its downward trajectory.

Turning to the older demographics, the 45-54 age group saw a marked decline from 70% in 2003 to just 50% by 2006, reflecting a significant reduction in internet activity. Similarly, the 55-64 age cohort began with a usage rate of 40% in 2003, only to drop to 27% by 2006, while the 65 and older demographic recorded the lowest engagement, beginning at 20% and culminating at 17%. These figures underscore a generalized trend of declining internet utilization across all age strata during the observed timeframe.

### Scores:

Overall Band Score: 9

Task Response: 9 - Excellent response to the task. All key features of the graph are accurately described and analyzed.

Coherence & Cohesion: 9 - The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

Lexical Resource: 9 - A wide range of sophisticated vocabulary is used accurately and appropriately. The language is precise and effective.

## Answer #5

### Response:

The bar graph presented elucidates the daily internet usage percentages among various adult age groups in the UK from 2003 to 2006.

A general trend is discernible, indicating a decline in internet engagement across all age segments during the specified timeframe, with the 16-24 age cohort consistently demonstrating the highest usage rates.

In the 16-24 age category, internet usage commenced at a robust 110% in 2003, peaking at 115% in 2004, and then experiencing a decrease to 105% in 2005, culminating in 100% by 2006. The 25-44 age group exhibited a steadier trend, starting at 80% in 2003 and increasing to 85% in 2004, but subsequently declined to 80% in 2005 and 75% in 2006. This illustrates a significant engagement level in the younger demographics while suggesting a more gradual decline among older, yet still comparatively active, users.

Conversely, older age brackets displayed a noticeable downturn in their internet usage. The 45-54 group started with 70% in 2003, which dipped to 65% in 2004 and further descended to 60% in 2005, finishing at 50% in 2006. Meanwhile, the 55-64 group began with a mere 40%, saw a brief rise to 45% in 2004, before plummeting to 40% in 2005, and concluding at 27% in 2006. Lastly, the 65 and older demographic exhibited the lowest engagement levels, initiating at 20% in 2003, increasing slightly to 25% in 2004, but ultimately declining to 20% in 2005 and 17% in 2006, confirming a pervasive diminishing trend across all older age groups.

### Scores:

Overall Band Score: 9

Task Response: 9 - Excellent response to the task. All key features of the graph are accurately described and analyzed.

Coherence & Cohesion: 9 - The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

Lexical Resource: 9 - A wide range of sophisticated vocabulary is used accurately and appropriately. The language is precise and effective.

Grammatical Range & Accuracy: 9 - The grammar is impeccable. A wide range of grammatical structures is used with complete accuracy and fluency.

The bar graph presented elucidates the daily internet usage percentages among various adult age groups in the UK from 2003 to 2006.

A general trend is discernible, indicating a decline in internet engagement across all age segments during the specified timeframe, with the 16-24 age cohort consistently demonstrating the highest usage rates.

In the 16-24 age category, internet usage commenced at a robust 110% in 2003, peaking at 115% in 2004, and then experiencing a decrease to 105% in 2005, culminating in 100% by 2006. The 25-44 age group exhibited a steadier trend, starting at 80% in 2003 and increasing to 85% in 2004, but subsequently declined to 80% in 2005 and 75% in 2006. This illustrates a significant engagement level in the younger demographics while suggesting a more gradual decline among older, yet still comparatively active, users.

Conversely, older age brackets displayed a noticeable downturn in their internet usage. The 45-54 group started with 70% in 2003, which dipped to 65% in 2004 and further descended to 60% in 2005, finishing at 50% in 2006. Meanwhile, the 55-64 group began with a mere 40%, saw a brief rise to 45% in 2004, before plummeting to 40% in 2005, and concluding at 27% in 2006. Lastly, the 65 and older demographic exhibited the lowest engagement levels, initiating at 20% in 2003, increasing slightly to 25% in 2004, but ultimately declining to 20% in 2005 and 17% in 2006, confirming a pervasive diminishing trend across all older age groups.

### Scores:

Overall Band Score: 9

Task Response: 9 - Excellent response to the task. All key features of the graph are accurately described and analyzed.

Coherence & Cohesion: 9 - The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

Lexical Resource: 9 - A wide range of sophisticated vocabulary is used accurately and appropriately. The language is precise and effective.

Grammatical Range & Accuracy: 9 - The grammar is impeccable. A wide range of grammatical structures is used with complete accuracy and fluency.

## Answer #16

### Response:

The bar graph illustrates the daily internet usage rates among adults across different age groups in the United Kingdom over a four-year period, from 2003 to 2006.

Overall, the data reveals a generalized decline in internet usage across all age categories during the specified timeframe, with the 16-24 age group consistently reporting the highest engagement, while the 65 and older demographic exhibited the least.

In the younger cohort of 16-24 years, the percentage of internet users started at approximately 110% in 2003, peaked at 115% in 2004, before experiencing a minor decline to 105% in 2005, ultimately dropping to 100% in 2006. This group demonstrated the highest levels of engagement throughout the period. The 25-44 age bracket showed a different trajectory, beginning at 80% in 2003, increasing to 85% in 2004, before returning to 80% in 2005, and finally declining to 75% in 2006. Similarly, the 45-54 age group exhibited a decreasing trend, starting at 70% in 2003 and reducing steadily to 50% by the end of the observed period.

For the older demographics, the 55-64 age group initiated internet use at 40% in 2003, experienced a slight uptick to 45% in 2004, followed by a reduction to 40% in 2005, and culminated at 27% in 2006. The 65 and older category reported the lowest usage rates, starting at 20% in 2003 and witnessing a modest increase to 25% in 2004. However, this figure fluctuated, ultimately decreasing to 20% in 2006. Collectively, these trends indicate that while younger adults increasingly engaged with the internet, the older populations showed a consistent decline in engagement over the specified period.

### Scores:

Overall Band Score: 9

Task Response: 9 - Excellent response to the task. All key features of the graph are accurately described and analyzed.

Coherence & Cohesion: 9 - The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

## Answer #18

### Response:

The bar graph presented delineates the daily internet usage among various age demographics in the UK from 2003 to 2006.

Overall, the data indicate a discernible decline in internet usage across all age groups throughout the specified period, with the 16-24 age bracket consistently demonstrating the highest engagement.

Specifically, individuals aged 16 to 24 exhibited the most robust internet usage during the years under review, with percentages starting at 110% in 2003, peaking at 115% in 2004, but subsequently declining to 105% in 2005 and 100% in 2006. In contrast, the 25-44 age group recorded a more moderate but steady decrease from 80% in 2003 to 75% in 2006. This group experienced a brief uptick in 2004 to 85% before reverting to its downward trajectory.

Turning to the older demographics, the 45-54 age group saw a marked decline from 70% in 2003 to just 50% by 2006, reflecting a significant reduction in internet activity. Similarly, the 55-64 age cohort began with a usage rate of 40% in 2003, only to drop to 27% by 2006, while the 65 and older demographic recorded the lowest engagement, beginning at 20% and culminating at 17%. These figures underscore a generalized trend of declining internet utilization across all age strata during the observed timeframe.

### Scores:

Overall Band Score: 9

Task Response: 9 - Excellent response to the task. All key features of the graph are accurately described and analyzed.

Coherence & Cohesion: 9 - The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.
