

Task 1: Multiple Graphs

Subject: The first chart below shows the percentages of women and men in a country involved in some kinds of home tasks (cooking, cleaning, pet caring and repairing the house). The second chart shows the amount of time each gender spent on each task per day. Summarise the information by selecting and reporting the main features and make comparisons where relevant. You should write at least 150 words.

Answer #1

Response:

The provided bar charts highlight the gender differences in household responsibilities, showing the proportion of males and females involved in four specific tasks cooking, cleaning, pet care, and house repairs and the average time spent by each gender on these activities daily. These charts clearly illustrate how men and women divide their domestic duties, revealing trends in participation rates and time commitment across different chores.

In participation rates, females demonstrate substantially higher involvement in cooking, with 85% engaged compared to 60% of males. A similar pattern exists in cleaning tasks, where 68% of women participate versus 40% of men. Pet care shows a more balanced distribution, though slightly favoring men at 23% compared to women's 20%. House repairs display a reverse trend, with 18% of men participating versus 8% of women.

Time allocation patterns follow similar trends. Women dedicate more time to cooking and cleaning, spending approximately 75 minutes on each task, while men spend roughly 30 minutes cooking and 40 minutes cleaning. Both genders allocate similar time to pet care, averaging 20 minutes. In house repairs, men spend 18 minutes more than women.

Overall, women show greater involvement in household chores, particularly in cooking and cleaning tasks. However, men demonstrate higher participation in house repairs, while pet care responsibilities remain relatively balanced between both genders.

Scores:

Overall Band Score: 9

Task Response: 9 - The report provides a comprehensive summary of the main features of both charts and makes relevant comparisons. All aspects of the task are addressed fully and accurately.

Coherence & Cohesion: 9 - The report is exceptionally well-organized and easy to follow. The logical flow of information is seamless, and the use of cohesive devices is sophisticated and natural.

Lexical Resource: 8.5 - The report demonstrates a wide range of vocabulary, used accurately and appropriately. The lexical choices are precise and enhance the clarity and sophistication of the writing.

Grammatical Range & Accuracy: 9 - The grammar is impeccable. A wide range of grammatical structures is used accurately and flexibly, contributing to the overall fluency and precision of the report.

Answer #2

Response:

The charts illustrate the percentage of men and women in a country involved in different household tasks (cooking, cleaning, pet care, and house repairs) and the average time each gender spends on these activities per day.

Overall, women are more involved in cooking and cleaning, while men are more engaged in pet care and house repairs. In terms of time spent, women also tend to spend more time on cooking and cleaning, whereas men allocate slightly more time to pet care and significantly more to house repairs.

In detail, around 80% of women are involved in cooking compared to just under 60% of men.

Similarly, about 60% of women participate in cleaning, whereas only about 40% of men do the same. For pet care, men's participation rate is slightly higher, at around 20%, compared to women's 15%. Notably, nearly 20% of men handle house repairs, but only a small fraction of women engage in this task.

Regarding time spent on each task, women spend an average of 80 minutes on cooking daily, almost double the 60 minutes spent by men. In cleaning, women spend approximately 70 minutes, compared to men's 45 minutes. Both genders spend roughly the same amount of time on pet care, at about 20 minutes. However, men spend significantly more time on house repairs, averaging 20 minutes per day, while women spend only around 5 minutes.

In summary, women are more likely to participate in and dedicate more time to cooking and cleaning, while men are more involved in house repairs and, to a lesser extent, pet care.

Scores:

Overall Band Score: 9

Task Response: 9 - The report provides a comprehensive summary of the data presented in both charts. All key features are accurately described and compared.

Coherence & Cohesion: 9 - The report is exceptionally well-organized and easy to follow. The logical flow of information is seamless, and the use of cohesive devices is highly effective.

Lexical Resource: 8.5 - A wide range of sophisticated vocabulary is used accurately and appropriately throughout the report. The lexical choices enhance the clarity and precision of the writing.

Grammatical Range & Accuracy: 9 - The report demonstrates a wide range of grammatical structures with complete accuracy and fluency. The writing is grammatically impeccable.
