

Task 1: Bar Chart

Subject: The bar chart shows the percentage of males and females aged 18-20 in a city who participated in various activities in one month

Model Answer #1

Response:

The diagram details men's and women's activities, aged between 18 and 20 years.

Overall, while men were active in playing sports—basketball, football, and hockey—women spent more time cycling and swimming than men. While the most prioritized type of sport for males was football, females preferred cycling more than other activities; but both groups were less interested in hockey.

According to the bar chart, the percentage of men's interest in football accounted for about 52%, more than women's 37%, and indicated the highest point in this diagram. Men also actively participated in basketball and hockey more than females, showing 33% and 12%, higher than those of the other group by 21% and 8%, respectively.

Meanwhile, females actively participated in swimming and cycling more than males. While their percentage was 40% in cycling, in swimming this figure accounted for 35%. These rates were higher than men's by 4% and 15%, respectively.

While men participated in football more than other activities, women prioritized cycling most. However, hockey was the type of sport to which both genders did not pay more attention than to other activities.

Evaluation:

Overall Band Score: 9

Task Response (9): The report fully addresses the task by accurately reflecting all the data in the chart and providing a clear overview of the information. All key features are described.

Coherence & Cohesion (9): The report is exceptionally well-organized and easy to follow. The logical flow of information is seamless, and the paragraphs are well-structured and appropriately linked.

Lexical Resource (8.5): A wide range of sophisticated vocabulary is used accurately and appropriately. The language is precise and natural, demonstrating excellent control of lexical features.

Grammatical Range & Accuracy (9): The report demonstrates a wide range of grammatical structures with complete accuracy and fluency. The grammar is impeccable.

Model Answer #2

Response:

The bar graph illustrates the proportions of people aged 18–20 who were engaged in various activities in a city in one month of 2015, comparing males and females.

Overall, football was the most popular activity for males aged 18–20, while cycling was the most preferred activity for females in this age group. Moreover, the percentage of males aged 18–20 who participated in most activities was higher than that of females, except for cycling and swimming.

Regarding football, approximately 52% of males in the 18–20 age group participated, 40% higher than the figure for females. Similarly, the percentage of males engaged in basketball was around one-third, 3 times as high as that for females.

Concerning the remaining activities, 40% and 35% of females aged 18–20 participated in cycling and swimming, respectively, while only about 4% participated in hockey. Additionally, 35% of male participants engaged in cycling, while the proportion of males who participated in swimming and hockey was significantly lower, at 20% and 12%, respectively.

Evaluation:

Overall Band Score: 9

Task Response (9): The report provides a comprehensive summary of the main features of the bar chart and makes relevant comparisons between the participation rates of males and females in different activities. All key aspects are covered accurately and effectively.

Coherence & Cohesion (9): The report is exceptionally well-organized and easy to follow. The information flows logically, with clear transitions between paragraphs and ideas. The use of cohesive devices is seamless and enhances the overall clarity and readability.

Lexical Resource (8.5): The report demonstrates a wide range of sophisticated vocabulary, used accurately and appropriately. The lexical choices are precise and enhance the overall quality of the writing.

Grammatical Range & Accuracy (9): The grammar is impeccable throughout the report. A wide range of grammatical structures is used accurately and flexibly, contributing to the overall fluency and sophistication of the writing.

Model Answer #3

Response:

The bar chart illustrates the percentage of males and females aged 18-20 in a city who participated in various activities over the course of one month in 2015.

Overall, the chart reveals that a higher proportion of males were involved in football, basketball, and hockey, whereas more females participated in swimming and cycling. Notably, hockey had the lowest participation rates for both genders.

In detail, football showed the most significant difference in participation between the genders, with over half of the men playing football, nearly three times the percentage of women at 15%. Similarly, more than a third of men engaged in basketball, which was threefold the female participation rate of 11%. Hockey, however, attracted only 11% of men and less than 5% of women.

Conversely, swimming and cycling were more popular among women. Approximately 35% of women preferred swimming, compared to 20% of men. Cycling had a closer gender distribution, with 40% of women and 35% of men taking part in this activity.

Evaluation:

Overall Band Score: 9

Task Response (9): The report provides a clear and accurate summary of the main features of the chart, highlighting key comparisons between male and female participation in different activities. The report effectively addresses all aspects of the task.

Coherence & Cohesion (9): The report is well-structured and logically organized. The information flows smoothly, with clear transitions between paragraphs and sentences. The use of cohesive devices enhances the overall coherence and readability.

Lexical Resource (9): The report demonstrates a wide range of vocabulary, using precise and appropriate language to describe the data. The language is sophisticated and natural, with no noticeable errors or limitations.

Grammatical Range & Accuracy (9): The report exhibits a wide range of grammatical structures, used accurately and flexibly. The grammar is error-free, and the punctuation is used correctly throughout.

Model Answer #4

Response:

The bar chart illustrates the proportion of men and women aged 18-20 in a city who engaged in several activities in a month in 2015.

Overall, young males took the dominance in most of these listed activities, except for cycling and swimming. Interestingly, the general engagement of men was relatively much larger than women.

Regarding the male gender, football was their most favored activity with the proportion of half, approximately 3 times as much as that of their counterpart. Similar patterns were also seen in basketball and hockey with the gap between the two genders being 20 percent and 5 percent, respectively. Although cycling and swimming were at the second and fourth rank with 38 percent and 20 percent respectively, these two brackets were the only fields in which males were surpassed by their counterparts.

In terms of women, the data was generally low in these activities with all brackets did not exceed 40 percent. On top of the list, cycling and swimming had the highest engagement from women with 40 percent and 35 percent, respectively, surpassing the figures of men. However, young females aged 18 to 20 were quite passive in remaining brackets, with the engagement of football, basketball, and hockey being under 15 percent.

Evaluation:

Overall Band Score: 9

Task Response (9): The report provides a comprehensive and accurate summary of the main features of the chart, highlighting key comparisons between male and female participation in different activities. The report effectively addresses all aspects of the task.

Coherence & Cohesion (9): The report is well-structured and logically organized. The information flows smoothly, with clear transitions between paragraphs and ideas. The use of cohesive devices enhances the clarity and readability of the report.

Lexical Resource (8.5): The report demonstrates a wide range of vocabulary, using precise and appropriate language to describe the data. The use of synonyms and varied sentence structures adds to the sophistication of the report.

Grammatical Range & Accuracy (9): The report exhibits excellent grammatical accuracy and a wide range of grammatical structures. The use of complex sentences and varied sentence lengths contributes to the fluency and clarity of the report.
