

Task 1: Table

Subject: The charts below show the comparison of time spent, in minutes per day, by UK's males and females on household and leisure activities in 2008. Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Leisure activities (Average minutes per day)	Men	Women
TV, video, radio	137	118
Reading	18	19
Sport	15	11

Model Answer #1

Response:

The table provides information on the average minutes men and women spent on recreational activities in the UK in 2008, while the bar chart illustrates the time devoted to household chores during the same year.

Overall, it is evident that, in terms of leisure activities, men spent more time than women in most categories. Conversely, the time devoted to household chores displayed an opposite trend between the two genders.

Regarding leisure activities, men averaged 137 minutes per day participating in indoor activities, such as watching TV or listening to the radio, which was 19 minutes more than women. Similarly, boys engaged in sports spent more leisure time than girls. The only exception was in reading, where women's average time was slightly higher, at almost half an hour per day, compared to men.

When it comes to household tasks, cooking and washing took the most time for both genders, with women spending over an hour daily and men spending about half an hour. Shopping followed as the next most time-consuming activity. Additionally, the amount of time females spent on laundry and ironing was double that of men. In contrast, men devoted twice as much time to repairs compared to women.

Evaluation:

Overall Band Score: 9

Task Response (9): Excellent response to the task. All key features are identified and compared appropriately.

Coherence & Cohesion (9): The report is very well-structured and easy to follow. The information is presented logically and coherently.

Lexical Resource (8.5): A wide range of vocabulary is used accurately and appropriately. The language is sophisticated and natural.

Grammatical Range & Accuracy (9): The report demonstrates a wide range of grammatical structures with complete accuracy and fluency.

Model Answer #2

Response:

The provided charts illustrate the daily time spent, in minutes, on domestic chores and recreational activities by both genders in the UK in 2008.

Overall, it is clear that watching TV, listening to the radio, and using video were the most popular leisure activities, while physical engagement was the least favored. Regarding household tasks, cooking and washing were preferred over other categories. Additionally, women tended to spend more time on household chores than men, whereas men spent more time on entertainment.

Examining the table, the figures show that TV, radio, and video consumed the most time, with men spending 137 minutes and women spending 118 minutes on these activities. The least favored leisure activity was sports, with men dedicating only 15 minutes and women 11 minutes. Both genders spent the same amount of time on reading, totaling 18 minutes for men and slightly more at 19 minutes for women.

According to the bar graph, women allocated a significant amount of time to kitchen chores, averaging around 80 minutes, while men spent less than half that time. Conversely, the least time was spent on repair work, with men allocating just under 20 minutes and women about 10 minutes. In terms of shopping, men spent around 35 minutes, which is about two-thirds of the time spent by women. However, men dedicated only 10 minutes to clothing-related tasks, while women spent three times as long, averaging half an hour.

Evaluation:

Overall Band Score: 9

Task Response (9): The report provides a comprehensive and accurate summary of the information presented in the charts. It effectively highlights the key features and makes relevant comparisons between the genders.

Coherence & Cohesion (9): The report is well-structured and logically organized. The information flows smoothly, and the use of cohesive devices is seamless.

Lexical Resource (8.5): The report demonstrates a wide range of vocabulary, which is used accurately and appropriately. The language is sophisticated and natural.

Grammatical Range & Accuracy (9): The report exhibits a wide range of grammatical structures, which are used with precision and fluency. The grammar and punctuation are flawless.

Model Answer #3

Response:

The table and the bar chart describe a breakdown of how many minutes a day the two gender groups in the UK allocated to do recreational activities and housework in 2008. Overall, men preferred entertainment activities, including watching TV, videos, and listening to the radio, as well as playing sports, whereas women spent more time doing household chores.

Regarding amusement activities, it can be seen that men dedicated over two hours daily to watching TV, videos, and listening to the radio, which was more than 20 minutes more than the time spent by women on these activities. Similarly, men participated in sports for an average of 15 minutes, while women allotted only 11 minutes per day. Reading is the most popular activity for both genders, with men spending 18 minutes and women 19 minutes daily.

Turning to housework, females allocated approximately 80 minutes per day to cooking and washing for their families, which is nearly double the amount of time spent by males. Activities such as clothing washing, ironing, and shopping were also more favored by women than by men. By contrast, for repairing activities, the time women spent was only half compared to the amount of time spent by men.

Evaluation:

Overall Band Score: 9

Task Response (9): The report provides a clear and accurate summary of the main features of the data, highlighting key comparisons between men and women. All relevant information is included and presented in a logical and well-structured manner.

Coherence & Cohesion (9): The report flows smoothly and logically, with clear transitions between paragraphs and ideas. The use of cohesive devices is sophisticated and contributes to the overall clarity and coherence of the report.

Lexical Resource (9): The report demonstrates a wide range of vocabulary, used accurately and appropriately. The language is precise and varied, with a sophisticated level of control over lexical features.

Grammatical Range & Accuracy (9): The report exhibits a wide range of grammatical structures, used with complete accuracy and flexibility. The grammar is error-free and contributes to the overall clarity and fluency of the report.

Model Answer #4

Response:

The picture consists of two parts: a table comparing the average amount of time the two genders spent on leisure activities in the UK in 2008, and a bar graph depicting time spent on household chores.

Overall, the data indicates that both men and women dedicated the most leisure time to watching TV, videos, or listening to the radio, while reading and sports activities occupied much less of their time. In terms of household chores, women spent significantly more time than men on cooking, cleaning, shopping, and laundry, whereas men were more involved in repair work.

Looking at the table more closely, one can see that British men in 2008 spent an average of 137 minutes per day on media-related leisure activities, 19 minutes more than women. Both genders spent relatively little time on reading and sports, with men dedicating 18 minutes to reading and 15 minutes to sports, while women spent 19 minutes and 11 minutes respectively on these activities.

Examining the bar graph, it is evident that women spent a considerable amount of time on household tasks compared to men. Women devoted nearly 80 minutes daily to cooking and washing, significantly more than men. Additionally, women spent a notable amount of time shopping and doing laundry, whereas men spent only 10 to 30 minutes on these tasks. Conversely, men allocated 20 minutes per day to repairs, which was double the time women spent on similar activities.

Evaluation:

Overall Band Score: 9

Task Response (9): Excellent response to the task. All key features are accurately reported and compared.

Coherence & Cohesion (9): The report is very well-organized and easy to follow. The information flows smoothly and logically.

Lexical Resource (8.5): A wide range of vocabulary is used accurately and appropriately. The language is sophisticated and natural.

Grammatical Range & Accuracy (9): The report demonstrates a wide range of grammatical structures with complete accuracy and control.

Model Answer #5

Response:

The table compares men and women in terms of the average time spent on various pastimes, while the bar chart illustrates the time allocated to housework. The survey was carried out in the UK in 2008.

Overall, for both genders, while watching TV, videos, and listening to the radio were the most popular leisure activities, cooking and washing dishes were the chores that took up the most time. What is also notable from the chart is that men spent more time on most leisure activities compared to women whereas women dedicated significantly more time to household tasks.

In terms of pastimes, both genders preferred watching TV, videos, and listening to the radio, with men dedicating around 137 minutes daily, about 20 minutes more than women. Men also engaged more in sports, averaging 15 minutes compared to women's 11 minutes. Conversely, reading was the only activity where women spent more time, albeit slightly, at 19 minutes as opposed to men's 18 minutes.

Regarding household chores, women spent the majority of their time cooking and washing dishes, averaging 75 minutes daily, more than twice the time men spent. Shopping was the second most time-consuming task for both genders, with women also spending more time than men, with respective figures being approximately 35 minutes and around 25 minutes. A similar pattern was seen in clothes-related chores, where women spent 30 minutes, triple the time men dedicated. Lastly, men spent just under 20 minutes on repairs, double the time women allocated to this task.

Evaluation:

Overall Band Score: 9

Task Response (9): The report provides a comprehensive and accurate summary of the information presented in the charts. It effectively highlights the key features and makes relevant comparisons between men and women.

Coherence & Cohesion (9): The report is well-structured and logically organized. The information flows smoothly, and the use of cohesive devices is seamless.

Lexical Resource (8.5): The report demonstrates a wide range of vocabulary, which is used accurately and appropriately. The language is sophisticated and natural.

Grammatical Range & Accuracy (9): The report exhibits a wide range of grammatical structures, which are used correctly and with precision. The punctuation is accurate and enhances the clarity of the writing.
