

Task 1: Bar Chart

Subject: Charitable donation made by British people from the year of 1990 and 2010 categorized by age group.

Model Answer #1

Response:

The provided bar chart illustrates the proportion of British individuals engaging in charitable donations across various age groups in the years 1990 and 2010.

Overall, there was a significant rise in charitable contributions among almost all age groups over the two decades, with notable variations in participation levels.

In 1990, the percentage of individuals donating to charity was lowest among the 18-25 age group, constituting roughly 5% of the total. In contrast, the 51-65 age group exhibited the highest level of charitable giving, with approximately 25%. Additionally, the 36-50 cohort accounted for around 15%, while the 26-35 and over 65 age groups contributed approximately 10% and 30%, respectively. This indicates that during this period, older individuals showed a greater propensity for charitable donations compared to their younger counterparts.

By 2010, there was a marked increase in charitable giving across all age categories. The 18-25 age group rose sharply to about 30%, while the 26-35 group increased to approximately 35%. Significantly, those aged 36-50 also demonstrated a considerable rise to nearly 40%. Conversely, the 51-65 age group experienced a slight decrease to about 35%, and the over 65 demographic saw a decline to 25%. This data suggests a pronounced trend of increased generosity among younger individuals, while older segments showed varying levels of engagement over the two decades.

Evaluation:

Overall Band Score: 9

Task Response (9): Excellent response to the task. All main features are summarized and comparisons are made effectively.

Coherence & Cohesion (9): The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

Lexical Resource (9): A wide range of sophisticated vocabulary is used accurately and appropriately. The lexical choices enhance the clarity and precision of the report.

Grammatical Range & Accuracy (9): The grammar is impeccable. A wide range of grammatical structures is used with complete accuracy and fluency.

Model Answer #2

Response:

The bar chart provides a comparative analysis of the proportion of charitable donations made by British individuals across various age groups for the years 1990 and 2010.

Overall, there is a discernible fluctuation in charitable donations between the two years, with notable increases in specific age cohorts while others exhibit a decline.

In 1990, the age group 36 to 50 years demonstrated the most substantial charitable engagement, with approximately 42% contributing to causes. In contrast, the younger cohort of 18 to 25 years displayed relatively minimal participation, with only around 17% making donations. By 2010, a reversal occurred: the participation rate among the 18 to 25-year-olds surged to about 30%, whereas the 36 to 50-year-olds experienced a decline to approximately 35%. The 26 to 35-year-old cohort similarly witnessed a decrease from 31% in 1990 to 24% in 2010, further indicating a shift in donation behavior among younger individuals over the two decades.

Conversely, older age groups exhibited positive trends in charitable contributions. The proportion of individuals aged 51 to 65 years increased from 35% in 1990 to nearly 40% in 2010, positioning this demographic as the most significant group of donors in the latter year. Furthermore, the oldest age bracket, those exceeding 65 years, also experienced growth in donations, climbing from approximately 30% to 35% from 1990 to 2010. This suggests a growing propensity for older individuals to engage in philanthropic activities over time, contrasting sharply with the tendencies observed in younger populations.

Evaluation:

Overall Band Score: 9

Task Response (8): The report addresses all parts of the task. Minor inaccuracies in data reporting do not detract from the overall quality.

Coherence & Cohesion (9): The report is exceptionally well-organized and easy to follow. The flow of information is natural and logical.

Lexical Resource (9): A wide range of sophisticated vocabulary is used accurately and appropriately. The language is precise and effective.

Grammatical Range & Accuracy (9): The grammar is impeccable. A wide range of grammatical structures is used with complete accuracy and fluency.

Model Answer #3

Response:

The provided chart offers data on the proportion of British individuals contributing money to charitable causes within various age brackets for the years 1990 and 2010.

Overall, the chart shows a significant rise in the percentages of charitable contributions made by individuals across all age groups from 1990 to 2010, with the 36-50 age group consistently exhibiting the highest donation rates, while the 18-25 age group consistently displaying the lowest.

Specifically, the 36-50 age group saw a substantial increase in charitable donations, starting at just above 15% in 1990 and experiencing a rise of around 20% to reach approximately 35% by 2010. Conversely, the 18-25 age group began at approximately 5% in 1990 and declined by nearly 10% to slightly over 5% in 2010.

On the other hand, the 26-35 age cohort started at over 30% in 1990, but witnessed a decrease to about 25% by 2010. In contrast, the 51-65 age group started at 25% in 1990 and surged to nearly 40% by 2010. Lastly, individuals over the age of 65 began at just over 30% in 1990 and saw a modest increase to 35% in 2010.

Evaluation:

Overall Band Score: 9

Task Response (9): The report provides a comprehensive and accurate analysis of the data presented in the chart.

Coherence & Cohesion (9): The report is well-structured and flows smoothly, with clear transitions between paragraphs and ideas.

Lexical Resource (9): The report demonstrates a wide range of vocabulary, using precise and sophisticated language to describe the data.

Grammatical Range & Accuracy (9): The report is grammatically accurate and uses a variety of complex sentence structures effectively.
